SUMMARY

Software Engineer with 3+ years of professional experience across two software factories (Colombia & Argentina), building production ERPs, multi-tenant SaaS platforms, and real-time systems. Designed and shipped tourism and appointment management ERPs with live MercadoPago payments, Socket.io real-time, BullMQ job queues, and Prometheus monitoring. Led a production database migration (200 tables, MyISAM → InnoDB), integrated AWS Secrets Manager into a .NET ERP, and hardened legacy PHP systems against SQL injection. Currently splitting my time between two parallel engagements: on-site Software Engineer at DynamoCrypt (Bahía Blanca) and remote freelance Software Engineer at Kheiron Company. Open to remote global (USD/EUR) or on-site opportunities in Argentina.

EXPERIENCE

Software Engineer (SSR)

DynamoCrypt · Mar 2026 - Present

Bahía Blanca, Argentina (on-site)

- Led a full database engine migration of Strix ERP (PHP): 200 tables from MyISAM to InnoDB on MariaDB, validated in staging and migrated table-by-table to production with backup checkpoints.
- Hardened SQL injection vulnerabilities in Portix and Strix, implemented query pagination, and optimized slow queries with targeted index creation.
- Replaced Apache with Nginx across legacy projects for improved performance and configuration control.
- Integrated AWS Secrets Manager into ERP URGARA Infinity (.NET Core), assembling connection strings from individual components and eliminating hardcoded credentials from the environment.
- Dockerized the Infinity ERP, enabling consistent local development and staging environments.
- Fixed a race condition in production (SetNumeroAfiliado) and a data integrity issue causing duplicated records in affiliate numbering.
- Currently leading EC2-to-RDS migration to improve database reliability, automated backups, and scalability.
- Contributing to architecture decisions and code reviews for a portfolio of 8+ clients including URGARA, Bilbao, GlobalTrade, Bahía Ambiental, and Lanchas del Sur.

Tech Stack: PHP, NestJS, TypeScript, C# / .NET Core, MySQL, MariaDB, PostgreSQL, Docker, Nginx, AWS (EC2, RDS, Secrets Manager), GitHub Actions

Software Engineer & Technical Coordinator (Freelance)

Kheiron Company S.A.S. · Jan 2024 - Present

Colombia (remote)

- Built Orion Tour, a full tourism ERP with reservation system, live MercadoPago payment integration, quotation engine, commission tracking, accounts payable/receivable, invoicing, credit notes, PDF/Excel export, QR vouchers, role-based access control, and a custom Fabric.js flyer editor — shipped to production with 1 active client.
- Built Luriam, an appointment and client management CRM for wellness businesses (luriam.com.mx), featuring real-time scheduling with Socket.io, job queues via BullMQ, transactional email with AWS SES, and web push notifications.
- Designed and implemented AresOne, a multi-tenant dropshipping SaaS platform where each client manages their own storefront; currently in beta testing with the first early adopter.
- Implemented DDoS protection using Cloudflare as a proxy, CDN with R2 for static assets, and multi-layer rate limiting (Nginx + application level).
- Set up CI/CD pipelines with GitHub Actions and established development and architecture standards for the engineering team.
- Coordinated a team of 3 engineers, conducted PR reviews, and managed workflow via GitFlow.

TECH STACK

TOOLS

LANGUAGES

- Spanish — Native
- English — B2 Intermediate
- Portuguese — B1 Intermediate

EDUCATION

- **Full Stack Web Developer**
Henry Bootcamp
2023-07 – 2023-10
- **Programming — Unity, C#, Java, Game Development**
Self-taught
2020-01 – 2023-06

- Designed entity-relationship diagrams and full system architecture proposals for a construction ERP (Argos).
- Developed enterprise apps using NestJS, Next.js, React, TypeScript, GraphQL, React Native, Apollo Client, and Firebase.

Tech Stack: NestJS, Next.js, TypeScript, PostgreSQL, Prisma, Redis, BullMQ, Socket.io, Fabric.js, MercadoPago, AWS (S3, SES), Cloudflare R2, Docker, Nginx, GitHub Actions, GraphQL, React Native, Firebase

Junior Full-stack Developer

DevLabs · Jan 2024 - May 2024

Remote

- Developed cross-platform iOS and Android applications using Next.js, React Native, TypeScript, and MaterialUI.
- Integrated real-time push notifications with Pusher and background geolocation tracking.
- Built a backend server with integrated Swagger API documentation.

Tech Stack: Next.js, React Native, TypeScript, MaterialUI, Docker, Pusher, Swagger

Junior Full-stack Developer

Covery (Insurtech) · Jul 2023 - Jan 2024

Remote

- Built a full-stack insurance platform using React, Express, and MySQL.
- Refactored backend services improving scalability and reducing page load time.
- Implemented UX/UI components that improved user retention.

Tech Stack: React, Express, MySQL, Node.js

Full-stack Developer (Internship)

Mercado de Residuos · Sep 2023 - Oct 2023

Remote

- Built a B2B commercial platform connecting waste generators with recycling companies, using React, Apollo GraphQL, Sequelize, and PostgreSQL.
- Led a team of 8 developers, coordinating sprints and maintaining consistent communication.
- Debugged and delivered improvements that increased system stability.

Tech Stack: React, Apollo GraphQL, Sequelize, PostgreSQL, Node.js

PROJECTS

AI Agent System

<https://kheiron.dev>

Design and operation of AI agent systems: an in-house AI-assisted development stack (Claude Code + OpenCode) and AI bots deployed to production as client products.

Orion Tour — Tourism ERP

<https://orientour.cloud>

Multi-tenant ERP for tourism agencies: end-to-end management of sales, operations, and finance. Covers products and circuits, quotation, reservations, invoicing, commissions, accounts payable/receivable, and reconcilable accounting reports — from sale to monthly supplier close-out.

Luriam — Appointment & Client CRM

<https://demo.luriam.com.mx>

Real-time appointment and client management system for wellness businesses, deployed at luriam.com.mx.

AresOne — Multi-tenant Dropshipping SaaS

SaaS platform where each client gets their own storefront optimized for conversion funnels, currently in beta with first early adopter.

Numaia — Gamified Educational App

<https://numaia.online/>

Mobile app for gamified math education for children, with an integrated AI tutor and a focus on Colombian biodiversity.

B2B Waste Marketplace

Commercial B2B platform connecting waste generators with recycling companies, facilitating sustainable waste management.

Family Bunny — Published Puzzle Game

<https://marcosmansilla.itch.io/family-bunny>

3D voxel puzzle game developed solo and published on itch.io for HTML5 and Android.
